1	ABSTRACT OF THE DISCLOSURE
2	
3	The invention is directed to a method of making a small crystal SSZ-32
4	zeolite, known as SSZ-32X. The catalyst is suitable for use in a process
5	whereby a feed including straight chain and slightly branched paraffins having
3	10 or more carbon atoms is dewaxed to produce an isomerized product, with
7	increased yield of isomerized material and decreased production of light ends
